Cohesity® Quickstart
A Quick Start Service for COHESITY®

Service Delivery **Overview**

The Cohesity Quick Start Service from MetroSys enables customers to efficiently plan and deploy a data protection solution for a diverse set of their critical workloads.

Customers can choose up to four workloads for integration and data protection on the Cohesity DataPlatform.

The service includes setup and scheduling replication on the installed cluster and replication target systems.

Our **Approach**

Planning - Our Professional Services team performs discovery and understands business requirements, architecture, and data protection requirements to ensure a successful project.

Design - Using the information from the planning phase, our team presents all options and best practices to determine the best solution and project plan.

Implementation
- Verify network configuration to optimize performance and throughput
- Create clusters, domains, and views
- Register sources and create protection jobs
- Automate operations and meet SLA requirements by assigning policies to protection job

Validation - The project team validates a sample of each use case in the new environment.

Monitoring, Alerting, & Reporting
Engineers demonstrate how to:
- Configure and use alert notifications
- Download raw data
- Schedule recurring reports for email delivery
- Generate on-demand reports

Knowledge Transfer - Provide knowledge transfer with customer so that the customer can administer and maintain the Cohesity DataPlatform.

Key **Benefits**

- Cost effect, efficient, risk-free implementation
- Realize benefits quickly with the rapid transition of workloads
- Optimized configuration to Best Practices
- Seamless integration with your solution
- Gain a better overall view of your environment and the specific issues and requirements of the project

Supported **Workloads**

Hypervisors
- VMware®
- Hyper-V®
- Pure Storage Array®

Physical Servers
- Microsoft Windows®
- Linux®
- UNIX®

Databases
- Microsoft SQL®
- Oracle®
- Office 365®

NAS Data Protection
- Dell EMC Isilon®
- NetApp®
- Pure Storage Array®
